Introduction
Thank you for purchasing Avisoft UltraSoundGate 116Hme. This bus-powered USB device supports single-channel high-speed data acquisition at sampling rates of up to 1 MHz. The accompanying recording software Avisoft-RECORDER USGH provides either continuous or triggered direct-to-disk recording with real-time spectrogram displays.

Installation procedure
First install the RECORDER USGH software either from the supplied software installation media (navigate to the subfolder RECORDER USGH and run setup.exe) or from the Avisoft Bioacoustics website (www.avisoft.com/downloads.htm or directly www.avisoft.com/RECORDER USGH.exe). This installation program will install both the RECORDER USGH application (rec_usgh.exe) and the required device drivers (usgh_xx16h.inf, usgh.sys) for the UltraSoundGate xx16H devices. When the installation procedure has completed, the UltraSoundGate unit can be connected to the computer. The device should then be detected as "Avisoft-UltraSoundGate 116H" and the pre-installed driver should be finally activated.

Under some circumstances it might happen that the silent installation of the device driver fails. If that happens, navigate to the Windows Control Panel > Hardware and Sound > Device Manager and right-click at the entry Other devices > Avisoft UltraSoundGate 116H and select the Update Driver Software... option. The click at Browse my computer for device driver software, click at Browse and navigate to the folder C:\Program Files (x86)\Avisoft Bioacoustics\RECORDER USGH\Drivers and finally click at Next. The completed device driver installation will then look like this:

Getting started
The supplied RECORDER USGH software can be launched from Start / All Programs / Avisoft Bioacoustics / RECORDER USGH

On the first program start, the configuration dialog box will be launched automatically (otherwise it is available from Options / Configuration). Select the desired Sampling rate from the Input Device Settings section and click at Ok. Then click at the Pause button (Monitoring/Pause) and the Start button (Monitoring/Start). You will then see the real-time spectrogram displaying the incoming signals. For details on the operation of the RECORDER software see the Avisoft-RECORDER manual and the section RECORDER USGH Software Settings in this guide.

Components of the UltraSoundGate 116Hme

1 XLR input connector
The 5-pole XLR input connector represents the analog inputs of the recording device and provide power supply voltages for external amplifiers and microphones. The connector scheme is as follows:

- Ground
- Positive input
- Negative input
- +5V supply voltage (max current 20 mA)
- +200V polarization voltage

2 TRG input
This 2-pole (mono) 2.5 mm mini-jack connector is electrically connected to the TRG button (7) and allows connecting an external trigger. This input is TTL-compatible (there is additionally an internal pull-up resistor of 10 kOhm to Vcc). Pulling this input to ground (for instance by closing a simple switch) will activate the logic USG TRG button.

3 DIN
This 2-pole 2.5mm mini-jack connector allows to connect an external digital signal. The input is TTL-compatible (internal pull-up resistor of 10 kOhm to Vcc). The status of this signal is stored in the LSB (bit 0) of the 16-bit data words that are transmitted over the USB and can be used as a sample-precise trigger source in the RECORDER software. It can be extracted afterwards by the Avisoft-SASLab Pro sound analysis software (e.g. for creating labels). The digital input functionality is not available in the 8-bit recording mode.

4 PHONES
This stereo 3.5mm mini jack connector allows to connect headphones or a small speaker for acoustically monitoring the incoming ultrasounds. A undersampling technique is being used to convert the ultrasonic sounds into audible signals. The undersampling ratio can be adjusted from the Advanced USGH settings dialog box of the RECORDER USGH software (see section RECORDER USGH Settings for details).

5 TRIGGER button
This button can control the .wav file recording process in the RECORDER software. To enable this mode of operation, one of the following Trigger source options must be selected from the configuration dialog box:

- USG TRG button auto hold: Pressing the button for more than 2 seconds will activate an auto hold mechanism (the recording continues after releasing the button and will stop once the button is pressed again). If the button is pressed for less than two seconds, it will only record as long as the button is being pressed.
- USG TRG button: The software will record as long as the button is pressed.
- USG TRG button inverted: The software will record as long as the button is not pressed or as long as the external TRG signal is not active (logic high).
- USG TRG button toggled: The software will start recording once the button is pressed and continues until the button is pressed again.

6 REC indicator
This amber colored LED will flash once the device is connected to the PC. It will be switched off once the RECORDER USGH software is running the in the monitoring mode. In this mode, the REC LED indicates whether the RECORDER software is recording the incoming data onto disk.

7 Peak level meter
The peak level meter indicates the instantaneous recording level. The red OVER LED indicates clipping (over-modulation). If this happens, the gain should be reduced by turning the gain control knob to the left.

8 POWER indicator
This green LED indicates that the unit is connected to the USB power supply.

9 GAIN control knob
This control knob adjusts the analog input recording level.

10 USB 2.0 interface

Other devices Hardware and Sound > Device Manager > Other devices > Avisoft UltraSoundGate 116H and select the Update Driver Software... option. The click at Browse my computer for device driver software, click at Browse and navigate to the folder C:\Program Files (x86)\Avisoft Bioacoustics\RECORDER USGH\Drivers and finally click at Next. The completed device driver installation will then look like this:
The input sample rate can be selected from the Input Device Settings section. Available sample rates are 1000, 750, 666, 500, 375, 400, 333, 300, 250, 214, 200, 187, 166, 150, 125, 100, 75, 62, and 50 kHz.

The Buffer setting determines the USB transfer buffer size on the PC. Shorter durations will provide low real-time spectrogram display latencies but might lead to erroneous USB transfers under certain conditions.

The Settings... button in the Input Device Settings section launches the Advanced USGH Device Settings dialog box that provides several additional device-specific options:

**Enable master/slave mode for synchronizing several devices** If you use more than one UltraSoundGate XX16H device, it is possible to synchronize their A/D converter sampling clock signals by connecting them through the SYNC sockets and activating this option (a 3 pole cable fitted with 3.5mm phone plugs is required). In such a set-up, one device acts as the clock master and the other devices listen to the clock signal as slaves.

**Activate slave mode for this device** In the master/slave mode, one device acts as the master and the others as slaves. So, this option must be disabled on the unit that should act as the master and must be enabled on all other slave units (all USG XX16H devices can act either as slave or master).

**Enable low power mode** The A/D converter chips can optionally be operated in a power-saving mode that would increase the battery life in mobile laptop-based systems. The low-power mode slightly degrades the dynamic range performance.

**Enable automatic offset compensation** If activated, this option removes potential DC offset voltages from the input signal.

**Enable band-pass mode** At a few sample rates (50, 62.5, 75, 150, 187.5, 200, 250, 333 and 375 kHz), the A/D converter can be configured for a special band-pass mode in which the analog input bandwidth ranges from fs/2 to fs instead of the normal mode from 0 to fs/2. This option can be advantageous for monitoring applications that require minimal .WAV file sizes. Note that the frequency scale of the resulting .WAV files will be reversed.

**Turn on the polarization voltage** This option activates the internal 200V polarization voltage generator of the UltraSoundGate XX16H devices and must be activated when using the CM16/CMPA microphones.

**Ignore GetOverlappedResult error** By default, the GetOverlappedResult error message will stop the monitoring/recording process. If this option is activated, the monitoring procedure will be immediately restarted, which is desired in long-term monitoring applications.

**Monitor undersampling ratio** This list box allows to select the desired undersampling ratio of the acoustic monitoring output (5) from 2 to 30 in steps of two. The internal D/A converter will be clocked at a rate that is equal to the selected input (A/D converter) sample rate divided by the selected ratio. The resulting output sample rate is displayed behind the ratio (= xxx Hz). For instance, if you have selected an input sample rate of 333333 Hz and an undersampling ratio of 10:1, the resulting output sample rate will be 33333 Hz. All input signal components above the Nyquist frequency (half of the output sample rate = 16666 Hz) will be folded down to the range between zero and the Nyquist frequency. For instance, a 30 kHz input signal will appear at the monitor output at a frequency of 3333 Hz.

Sound-activated recording can be arranged by selecting the Trigger source option level of this channel. For remote-controlled triggering via the trigger button on the device or via the external TRG input, one of the trigger options USG TRG button... can be used. For triggering by a TTL signal attached to DIN, select UltraSoundGate DI.

The Pre-trigger duration should be kept as short as possible. Long pre-trigger settings can lead to data transmission errors if the sample rate and the number of channels is high.

In order to simplify the operation of the Avisoft-RECORDER software in the field, a link to RECORDER USGH may be added to the Windows Startup folder (Start->All Programs->Startup). Additionally, the Avisoft-RECORDER option Monitoring/Autostart should be activated. This arrangement will start the monitoring process automatically after booting the laptop (the UltraSoundGate device must be attached to the USB port prior to booting Windows).

Please refer to the users guide or the online help system for further details on the Avisoft-RECORDER software.
End-user Agreement

This a legal agreement between Avisoft Bioacoustics and the buyer. By operating this device and the accompanying software, the buyer accepts the terms of this agreement.

1. The Device and the accompanying software is warranted to perform substantially in accordance with the operating manual for a period of twelve month from the date of shipment.

2. EXCEPT AS SET FORTH IN THE EXPRESS WARRANTY ABOVE, THE DEVICE IS PROVIDED WITH NO OTHER WARRANTIES, EXPRESS OR IMPLIED. THE VENDOR EXCLUDES ALL IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

3. The Vendor’s entire liability and the Buyer’s exclusive remedy shall be, at the Vendor’s SOLE DISCRETION, either (1) return of the device and refund of purchase price or (2) repair or replacement of the device.

4. THE VENDOR WILL NOT BE LIABLE FOR ANY SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES HEREUNDER, INCLUDING, BUT NOT LIMITED TO, LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA OR INFORMATION OF ANY KIND, ARISING OUT OF THE USE OF OR INABILITY TO USE THE DEVICE IN NO EVENT SHALL THE VENDOR BE LIABLE FOR ANY AMOUNT IN EXCESS OF THE PURCHASE PRICE.

5. This agreement is the complete and exclusive agreement between the Vendor and the Buyer concerning the device.
### Specifications

- **Number of channels**: 1
- **ADC type**: Delta-Sigma architecture with integrated adaptive anti-aliasing filter
- **Resolution**: 16 bit or 8 bit
- **Sample rates [kHz]**: 1000, 750, 666.6, 500, 400, 375, 333.3, 300, 250, 214, 200, 187.5, 166.6, 150, 125, 100, 75, 62.5, 50
- **Frequency response (-3dB)**: 20 Hz - 460 kHz
- **Input sensitivity (max trim)**: -43.2dBV = -41 dBu = 6.9 mVrms
- **Input sensitivity (min trim)**: -3.2dBV = -1 dBu = 0.69 Vrms
- **Gain adjustment potentiometer**: 40 dB continuous range
- **Input impedance**: 50 kOhm
- **Analog input connector**: female XLR-5 socket
- **Other inputs**: external trigger (TTL-compatible), digital input (TTL-compatible)
- **Computer interface**: USB 2.0, isochronous high-speed mode
- **Max supply current (drawn from the USB)**: 250 mA
- **Physical dimensions (W/H/D)**: 58 x 22 x 160 mm
- **Weight**: 200 g

### Computer requirements

Windows PC with at least one USB 2.0 port, running Windows Vista / 7 / 8 / 10
Installing the GPS Receiver

The supplied USB GPS receiver allows to log the geographic coordinates of the recorded .wav files from the Avisoft-RECORDER software.

It is required to install a device driver for the GPS receiver. This can be done from the supplied NAVILOCK installation CD, from the GPS subfolder on the Avisoft Bioacoustics CD or from the manufacturer website www.navilock.com.

Once the GPS receiver is connected to the PC, a new USB device will be detected and its “USB-Serial Controller” driver should be finally activated.

The successfully installed driver is listed on the Ports section of the Windows Device Manager as a “Profilic-to-serial Comm Port”:

Windows automatically assigns the GPS receiver to a virtual COM port (COM6 in the above example).
See also the RECORDER manual or click at the Help... button to get further information on how to set it up.

The optionally available notebook carrying frame also allows to attach the USB GPS receiver to it, which makes the entire system more convenient.

Alternatively, a battery-powered Bluetooth GPS receiver could be used, which would eliminate the additional cable connection. The principle of the data transfer is the same because the Bluetooth communication is established through a virtual COM port.
